For your body and your mind

EMBODY IS GOOD FOR YOU

You point. You click. You fixate on your computer screen. You sit without moving for hours. Engrossed. Focussed. Perfectly still. Then your body screams, “Move!”—unless you’re sat in Embody, the first chair to promote healthful sitting by encouraging movement.

Embody lets you move more naturally so you can stay focused on your work and think more clearly. It puts you in control, readdressing the way you sit in front of technology. Clarity of thought through natural support—Embody is good for your body and your mind.

Pixelated Support™ distributes your weight evenly.

Translucent casters add elegance.

MOVEMENT IS KEY TO GOOD HEALTH

Almost all office work processes have become computer based, which means you’re tied to your computer for longer periods of time, often in strained postures. You become uncomfortable, which can distract your mind and reduce performance.

Movement is key to good health. When you sit in the Embody chair, its instinctive back adjusts to your shifting positions and Pixelated Support™ helps keep your blood circulating. Its narrow backrest lets you move your arms freely, encouraging air intake into the lungs for more oxygen to feed your body and your brain.

SUPPORT THROUGH HARMONY

For superior comfort, Embody’s backrest and seat conform to your unique shape and distribute your weight evenly. Embody has no hard, rigid frames so edges flex and forgive when you make contact.

The tilt—designed especially to support the working recline posture—encourages you to move naturally, keeping your head aligned with your computer display, and your spine in a neutral posture. Embody creates harmony between you and your computer so you can focus on your work.

MORE IDEAS FOR YOU

What’s the value of an idea? In an economy where ideas are crucial to maintain competitive advantage, keeping your brain at peak operating performance has never been more important.

Embody is designed to support your body intuitively, keeping you in harmony with the ambient environment, think more clearly, and be more creative. Through its health-positive benefits, Embody supports your body, which means your mind is free to come up with valuable ideas.

Embody's back conforms to your unique spinal curve.

Use the 360° joystick to adjust seat height.

Rolling front edge adjusts seat depth.

Embody's back looks like your back - it's designed to move like you move.

Bill Stumpf

FORM = FUNCTION

Designed by Jeff Weber and the late Bill Stumpf, Embody's look communicates its performance. Its human-inspired form, which mimics the spine, is driven by its health-positive features. Its textile—more like a skin than a covering—is not intended to cover up, but to enhance. Embody allows the user to experience physically and visually full functionality of the chair. The textile colour palette includes beautiful, contemporary colours that pair with two frame colours and three base colours to simplify choice and maximise appeal to global tastes.

EMBODY HELPS THE WORLD AROUND YOU

The Embody chair supports Herman Miller's commitment to the environment. It is McDonough Braungart Design Chemistry (MBDC) Cradle-to-Cradle Silver certified and GREENGUARD® certified. Embody has 42 percent recycled content, is 95 percent recyclable, and contains no PVCs.

Choose from two frame finishes—91 White or G1 Graphite—and three base finishes—Polished Aluminium, Titanium, or Graphite—to accompany Embody's compelling textile palette.

12-year, 3-shift warranty

Like all Herman Miller products, the Embody chair is durable for long-term performance and value. As a statement of our confidence in its quality, Embody is covered by the Herman Miller Warranty—a straightforward promise that we stand behind that quality 100 percent. The 12-year, 3-shift warranty covers all standard elements, excluding fabric and gas lift, and includes labour on all warranty work.
